Issued by

C4r

The purpose of this report is to gather all the important characteristics of the cryptocurrency or token. The report is performed in the following order:

1. Basic information
2. Analysis
3. Conclusion

Note that the result of this report should be interpreted as an independent analysis, not as a signal to buy or sell an asset. Please, always DYOR.

1. Basic information

APT is the native cryptocurrency of the Aptos blockchain, developed by former Meta (Facebook) employees who worked on the Diem project. Its primary purposes are:

- Transaction fees. APT is used to pay for transaction costs on the Aptos network, similar to how ETH works on Ethereum.
- Governance. APT holders can participate in protocol governance decisions, voting on proposals that affect the network's development and parameters.

The token was designed to support Aptos's high-performance Layer 1 blockchain, which uses the Move programming language and aims to provide fast, secure, and scalable blockchain solutions for decentralized applications (dApps).

2. Analysis

In the following table we will show the different areas researched, such as tech, strategy and economy.

APT - Aptos							
Tech	Type	Cryptocurrency		Token		Others	
	Layer	0	1	2	3	Others	
	Blockchain	Bitcoin	Ethereum	Solana	BNB Chain	Others	
	Category	Utility	Security	Stable	Meme	Others	
	Consensus	PoW	PoS	PoA	PoB	Others	
	ISO	Yes			No		
	Audits	Yes			No		
	Auto Audit ⁽¹⁾	0	1	2	3	4	5
Strategy	Roadmap	Yes			No		
	Partnerships	Yes			No		
	Team	Yes			No		
	Social media	Abandoned		Active		Others	
	CAPED ⁽²⁾	0	1	2	3	4	5
Economy	Supply	Limited			Infinite		
	Burn	Yes			No		
	Collateral	Yes			No		
	Tokenomics ⁽³⁾	0	1	2	3	4	5

(*) The table structure might be subject to changes if the project demands customization

Overall, the analysis has been carried out very satisfactorily.

On the one hand, the tech block shows that the project is a layer 1 cryptocurrency with a Proof of Stake consensus protocol. This makes it independent, innovative, and efficient, thanks to being hosted on its own blockchain, Aptos.

Moreover, being a digital asset categorized as 'utility' with multiple audits executed by reputable firms (CertiK, OtterSec, and Zelic), it demonstrates a strong commitment to security. However, it has not been subject to ISO certifications, which prevents it from achieving a higher score in this block.

On the other hand, regarding the strategy block, the project shows strong fundamentals. With a clear public roadmap, transparent team composition, excellent partnerships with tech giants like Google Cloud and Microsoft Azure, and actively maintained social media presence, Aptos demonstrates professional project management and community engagement.

Finally, looking at the token economy, APT shows a weak tokenomics model with an unlimited supply. In addition it doesn't have collateral backing, so the combination of these features along with its utility in network security and governance results in a low tokenomics score of 1 out of 5, reflecting a poorly-designed economic model.

*(1) The auto audit score is performed by 5 different digital audits: Quick Intel, Go Plus, HoneyPot, Token Sniffer and StaySAFU through the DEXTools app.

*(2) The CAPED score is an analysis of capitalization, trader's activity, price performance, development and engagement. This analysis was deployed initially by the Alpha Intelligence team of Hacken.

*(3) The tokenomics score is performed by COIN4RATING considering factors as supply, burn mechanism, distribution, vesting and possibility of staking/liquidity pools.

3. Conclusion

The report provides a comprehensive yet concise analysis of the project's key characteristics. After thorough investigation, we confidently assess the project's performance as achieving the following rating:

(*) Note: Rating is from AAA+ to C- scoring.
