Issued by

**C4r**

The purpose of this report is to gather all the important characteristics of the cryptocurrency or token. The report is performed in the following order:

1. Basic information
2. Analysis
3. Conclusion

Note that the result of this report should be interpreted as an independent analysis, not as a signal to buy or sell an asset. Please, always DYOR.

## 1. Basic information

BSV (Bitcoin SV, where "SV" stands for "Satoshi Vision") is a cryptocurrency that originated from a hard fork of Bitcoin Cash (BCH) in 2018. It claims to be the most accurate implementation of Bitcoin's original protocol as described in Satoshi Nakamoto's 2008 whitepaper, with a strong emphasis on scalability, stability, and real-world utility for businesses and data applications. Its key purposes include:

- **Blockchain Scalability.** BSV is designed to handle massive transaction volumes by removing artificial block size limits. The network has demonstrated the ability to process blocks as large as several gigabytes, enabling low fees and high throughput for both payments and data storage.
- **Enterprise and Data Solutions.** Unlike many cryptocurrencies focused solely on peer-to-peer payments, BSV promotes itself as a blockchain for enterprise use cases. It supports tokenization, smart contracts, and large-scale data storage, making it suitable for applications like supply chain tracking, digital identity, and content distribution.

Despite its technical ambitions, BSV remains a polarizing project due to its association with controversial figures and legal disputes.

## 2. Analysis

In the following tables we will show the different areas researched, such as tech, strategy and economy.

BSV							
Tech	Type	Cryptocurrency		Token		Others	
	Layer	0	1	2	3	Others	
	Blockchain	Ethereum	Cosmos	Solana	BNB Chain	Others	
	Category	Utility	Security	Stable	Meme	Others	
	Consensus	PoW	PoS	PoA	PoB	Others	
	ISO	Yes			No		
	Bug Bounty	Yes			No		
	Audits	Yes			No		
	Auto Audit <sup>(1)</sup>	0	1	2	3	4	5

\*(1) The auto audit score is performed by 6 different digital audits: Certik Skynet, Quick Intel, Go Plus, Honeybot, Token Sniffer and StaySAFU through the DEXTools app

On the technical side, BSV operates as a decentralized layer 1 cryptocurrency using Proof of Work, staying true to Bitcoin's original vision. However, concerns about centralization exist due to its relatively low number of miners. The network prioritizes scalability and ultra-low-cost transactions, making it primarily focused on payments and data utility.

In addition, while it lacks formal audits or ISO certifications, it does maintain a bug bounty program powered by Immunefi to address security vulnerabilities.

BSV							
Strategy	Governance	Centralized		Decentralized		Others	
	Open Source	Yes			No		
	Roadmap	Yes			No		
	Partnerships	Yes			No		
	Public Team	Yes			No		
	Social media	Abandoned		Active		Others	
	CAPED <sup>(2)</sup>	0	1	2	3	4	5

<sup>(2)</sup> The CAPED score is an analysis of capitalization, trader's activity, price performance, development and engagement. This analysis was deployed initially by the Alpha Intelligence team of Hacken

Regarding strategy, BSV has an updated roadmap as of 2024 but lacks transparency in team visibility—despite being headquartered in Switzerland, no specific team members are listed on its official channels. Social media remains active, but the absence of clear partnerships or a detailed public team limits its decentralization credibility.

BSV							
Economy	Supply	Limited			Infinite		
	Burn	Yes			No		
	Collateral	Yes			No		
	Buybacks	Yes			No		
	Tokenomics <sup>(3)</sup>	0	1	2	3	4	5

<sup>(3)</sup> The tokenomics score is performed by COIN4RATING considering factors as supply, burn mechanism, distribution, vesting and possibility of staking/liquidity pools

For tokenomics, BSV features a fixed supply with no burn mechanism, collateral, or buyback program. Its economic model emphasizes transactional utility over deflationary features, resulting in a moderate tokenomics score. While its scalability and low fees are strengths, the lack of incentivized scarcity mechanisms prevents a higher rating

Overall, the analysis has been carried out satisfactorily.

### 3. Conclusion

The report provides a comprehensive yet concise analysis of the project's key characteristics. After thorough investigation, we confidently assess the project's performance as achieving the following rating:

(\*) Note: Rating is from AAA+ to C- scoring.
